

Port Operations

- Port Operations

HPC has experience in tackling operational problems in many ports and deploys specialists throughout the world to assist in the day-to-day operation of cargo handling terminals. In the course of such assignments, improvements in operational efficiency and productivity are constantly being sought. HPC is able to utilise the experience gained in these situations and apply it to achieve similar results in other ports. Together with the direct operational expertise of our parent company, HHLA, this places us in a unique position to assist our clients in the improvement of routine operations.

Implementation, Temporary Management
